## Project Name:

Payment Management System

## Project Details:

Payment management consists of the method by which an organization pays its employees for their work performed during a certain period. A payment system allows businesses to follow a set sequence of processes to make timely, accurate payments in accordance with organization rules and regulations. The payments process mainly includes measuring the workers' payment, keeping the records of payment transactions between the employee and manager.

It accompanies with the connection build up with the server connected to Admin, Department, Employee and lastly payments. A company must have in place a maintenance system that accurately reflects the time spent by the employee and number of days put in by employees with the addition of the regular salary payments. Companies should include Social Security including the taxes, medical expenses and other facilities provided by the company.

## Technology Used:

**Front-End:** HTML, CSS, XAMPP and JavaScript

**Back-End:** MySQL, PHP, Microsoft Visual Code
